

ICT 2008 Networking Session

Towards a Future Internet of Services

25 November 2008, 14.00 – 15.30 Hour

http://ec.europa.eu/information_society/events/cf/item-display.cfm?id=585

Background and Objective

This networking session was initiated by the post-Bled Software and Services Working Group in preparation for the Future Internet Assembly (<http://services.future-internet.eu/>). The session aims to provide a public forum to debate the vision of and approaches to the Internet of Services (IoS) from a variety of viewpoints, with a view to preparing contributions for the next Future Internet Assembly in Madrid (www.fi-madrid.eu). The specific target areas of contributions include: Future Internet Service Offer, Management and Governance, Socio Economics, Identity and Trust. Contributions in other areas from stakeholders are also welcome.

Target Participants

The session is targeted at all stakeholders of the IoS, including researchers, technology developers, businesses, policy makers, NGOs and civil society. We also encourage participants from areas outside of the service domain (e.g. networks, security, content, Internet of Things, Experimental Facilities).

Agenda

Joint chairs: Man-Sze Li, IC Focus
John Domingue, The Open University and STI International

Welcome and Introduction (10 minutes)

Position Statements from a cross-section of Stakeholders (5 minutes each)

- Stefano De Panfilis, Engineering
- Alex Galis, UCL
- Nick Wainright, HP Labs
- Mike Boniface, IT Innovation
- Werner Mohr, Nokia Siemens Networks
- Hendrik Berndt, DOCOMO Euro-Labs

Open discussion (35 minutes)

For sample issues, please refer to the attachment posted at the above session webpage¹.

Conclusions and Next Steps (10 minutes)

Session Follow-up

A report of the session will be drawn up after the event and, together with speakers' presentations, published at a dedicated webpage of the Software and Services Working Group: <http://services.future-internet.eu/index.php/ICT08>.

¹ The attachment, initially compiled in June, is out of date. A new version is expected to be posted in the week prior to the event.
